SANISH MAHARJAN

+1-437-922-9055 • Mississauga, ON • m.sanish1225@gmail.com

SUMMARY

Senior Backend Developer with nearly 7 years of experience architecting and maintaining high-concurrency, load-balanced PHP applications. Deep expertise in **Laravel**, **PHP**, **NodeJS**, **Docker/Kubernetes**, **WebSockets**, and **data pipelines**. Proven track record of transforming disparate data sources into normalized datasets, optimizing real-time notification systems, and leading small sprint teams through code reviews and pair programming. Passionate about clean, tested code and shipping products iteratively in fast-moving environments.

TECHNICAL SKILLS

Backend Languages & Frameworks: **PHP**, **Laravel**, **NodeJS**, Express.js, NestJS, Fastify, CodeIgniter, Rails
Frontend: **VueJS**, React, NextJS, JavaScript, TypeScript, HTML5, CSS, Tailwind, Bootstrap, jQuery, Ajax
Real-Time & WebSockets: **WebSockets**, **Pusher**, Socket.IO, Push Notifications, Real-Time Odds/Data Streaming
Queuing & Async Processing: **Redis Queues**, **Bull**, RabbitMQ, Laravel Queues, Jobs, Background Workers, Cron Scheduling
Containerization & Orchestration: **Docker**, **Kubernetes**, Helm, Containerized Deployments, Load-Balanced Applications
Cloud & DevOps: AWS, Microsoft Azure, Heroku, CI/CD, Geographic & Data Residency Patterns, Performance Instrumentation
Data Pipelines & Normalization: Data Pipelines, ETL, Disparate Data Source Ingestion, Data Normalization, Match/Odds-Style Data Modeling, High-Concurrency Systems
Databases: MySQL, PostgreSQL, SQL Server, SQLite, MongoDB, NoSQL, Redis, Sequelize, Mongoose
Security Design: **RBAC**, OWASP, JWT, OAuth, Secure Transaction Protocols, Data Residency Compliance, Encryption
Testing & Code Quality: Automated Testing, Unit Testing, Integration Testing, Mocha, Chai, PHPUnit, Code Reviews, Pair Programming, Clean Tested Code
Architecture & APIs: Microservices, RESTful API, GraphQL, Event-Driven Architecture, Role-Based Access Control, Scalable System Design
Version Control & Tools: Git, GitHub, GitLab, Postman, Amazon EC2, S3, NumPy, pm2, Passport.js, Tuple (Pair Programming)
Operating Systems: Linux, MacOS, Windows
Certifications: Microsoft Azure Certifications

PROFESSIONAL EXPERIENCE

Aware Ads. Inc., Toronto, ON: Senior PHP Developer | Backend Engineer July 2025 – Present

- Architected, developed, and maintained backend application code in **PHP (Laravel)** and **NodeJS** for a high-concurrency advertising platform.
- Transformed disparate third-party ad network data sources into normalized datasets for real-time bidding, reporting, and analytics pipelines.
- Designed and implemented **RESTful APIs** and **microservices** supporting high-volume ad delivery with load-balanced application architecture.
- Optimized real-time notifications of campaign metrics using **WebSockets** and **Redis** queues, reducing latency and improving user experience.
- Led a small sprint team, participating in sprint planning, conducting code reviews, and pair programming to ensure clean, tested code.
- Implemented **RBAC**, **JWT**/**OAuth** authentication, and security-first design patterns to protect sensitive advertiser data.
- Containerized services with **Docker** and orchestrated deployments on **Kubernetes**, ensuring geographic and data residency compliance.
- Instrumented application performance monitoring and automated testing pipelines, maintaining high code quality and reliability.

VisionTale Studio, GTA, ON: Senior PHP Developer | Full Stack Engineer July 2024 – June 2025

- Architected and maintained scalable web applications using **PHP (Laravel)** for the backend and **ReactJS** for dynamic, interactive frontends.
- Built immersive digital storytelling platforms, transforming raw content data into normalized, action-ready datasets.
- Optimized database interactions and complex SQL queries, reducing data retrieval time by 15% and enhancing overall system performance.
- Collaborated with cross-functional teams to design and ship features iteratively, improving user engagement by 20%.
- Conducted code reviews and pair programming sessions to mentor junior developers and maintain clean, tested code.

RBC PayEdge, Toronto, ON: PHP & NodeJS Backend Developer Apr. 2023 – June 2024

- Devised, developed, maintained, and deployed robust backend components — modules, microservices, views, queues, jobs, and APIs — using **PHP, Laravel**, and associated development tools.
- Architected and documented multiple microservices and modules to enhance system scalability and reliability.
- Integrated third-party web services and developed dynamic front-end interfaces using PHP and JavaScript, improving user engagement by 25%.
- Released **RBC QuickPay**, processing over $50 million in transactions within 4 months without issues, earning praise for reliability and performance.
- Optimized SQL queries and databases (e.g., AML reporting), facilitating efficient data handling and report generation.
- Implemented secure authentication with JWT and OAuth; performed rigorous unit testing, debugging, and troubleshooting.

Null Pointers, Kathmandu: PHP Full Stack Developer | Software Engineer Feb. 2018 – Aug. 2022

- Followed Agile development methodologies throughout the SDLC, contributing to Scrum practices and sprint planning.
- Developed front-end modules using **Vue.js**, JavaScript, and CSS, creating responsive and dynamic user interfaces.
- Optimized database operations with **PHP**, **NodeJS**, SQLite, and MySQL, reducing data retrieval time by 20%.
- Implemented real-time features using **Socket.IO** and **Pusher**, enabling live data updates for interactive applications.
- Maintained version control through Git, managed release documentation, and conducted integration testing.
- Collaborated with front-end developers to finalize backend features and deliver end-to-end solutions.

EDUCATION

B.E. Computer Engineering
Tribhuvan University
Key Courses: Data Structures and Algorithms, Advanced Java, Computer Networks, Object-Oriented Programming, Software Engineering, Distributed Systems, Operating Systems.

PROJECTS

RBC QuickPay
Tools Used: PHP, NodeJS, RBC Domain, Kubernetes, Microsoft Azure, MySQL, REST API, GitHub, Apache Server, Xampp, Postman.

- Engineered a real-time money transfer system using RBC Domain, enabling instantaneous fund transfers between accounts.
- Integrated secure transaction protocols to ensure the safety and confidentiality of user financial data during transfers.
- Developed a scalable and responsive architecture to handle high transaction volumes, providing a seamless user experience.
- Secured data transmission channels to protect real-time statistics from unauthorized access and tampering.

NDDS (National Direct Deposit Service)
Tools Used: PHP, Redis, RBC Domain, Kubernetes, Microsoft Azure, MySQL, REST API, GitHub, Apache Server, Xampp, Postman

- Led developing and optimizing a high-volume record processing system, importing over 13,000 records daily.
- Implemented performance-enhancing strategies to manage large-scale data efficiently, minimizing processing time and maximizing throughput.
- Designed robust error-handling mechanisms to ensure data integrity and reliability throughout the import process.
- Ensured compliance with industry-standard security practices to protect sensitive financial data during the import process.

PUBG Tournament Statistic Maker

Tools Used: Pusher, Laravel, C/C++, MySQL, REST API, GitHub, Apache Server, Xampp, Postman

- Designed and implemented simulation models to predict player performance and team rankings based on live and historical data.
- Utilized data modeling techniques to structure and analyze match statistics, ensuring seamless real-time updates during live streams.
- Implemented synchronous data updates using Pusher, ensuring all participants receive live information without delays.
- Designed and integrated animated slides for visual presentation of statistics, enhancing viewer engagement.

Kalipso

Tools Used: PHP, Laravel, NodeJS, VueJS, MySQL, Redis, WebSockets, Pusher, REST API, Docker, Kubernetes, GitHub, Postman

- Architected and developed Kalipso, an ad-tracking and lead-generation platform enabling businesses to monitor campaign performance, capture leads, and optimize conversions in real time.
- Built a real-time ad-tracking engine that ingests disparate click, impression, and conversion events from multiple ad networks and normalizes them into a unified dataset for reporting and attribution.
- Engineered real-time notifications and live dashboards using **WebSockets** and **Pusher**, giving clients instant visibility into ad performance and incoming leads.
- Optimized high-concurrency event ingestion using **Redis** queues and background workers, ensuring reliable processing of large volumes of tracking data without loss.
- Containerized the platform with **Docker** and deployed on **Kubernetes**, ensuring scalability, load balancing, and geographic data residency compliance.
- Implemented automated testing and performance instrumentation to maintain clean, tested code and monitor system health under peak traffic.

Sryngar Ecommerce

Tools Used: Laravel, MySQL, Typescript, Tailwind, REST API, GitHub, Apache Server, Xampp Control Panel, Postman

- Architected and implemented a B2C e-commerce platform enabling seamless online transactions for cosmetic products.
- Integrated multiple payment gateways, enhancing user convenience and transaction security.
- Designed a user-friendly interface with responsive design, ensuring optimal usability across devices.

Bakes and Cake

Tools Used: Laravel, MySQL, REST API, GitHub, Apache Server, Postman

- Engineered an online platform for dairy product sales, including an admin panel for detailed tracking of sales and inventory.
- Enabled product customization features, allowing customers to personalize orders based on preferences.
- Integrated real-time analytics and reporting tools to monitor sales performance and customer engagement.

Jojolapa Garden Restaurant

Tools Used: Laravel, MySQL, GitHub, Cpanel Hosting, Apache Server, Xampp, Postman

- Developed a comprehensive menu management system allowing restaurant admins to update prices and items in real-time.
- Implemented dynamic pricing mechanisms based on unit quantities, improving the flexibility of the pricing model.
- Designed a user-friendly gallery feature for showcasing menu items, enhancing customer interaction and decision-making.
